Conclusion

Appendix

Executive Summary

Project Description

Highly likely it will take more than this amount of effort and data to predict on this crucial project

Key Findings:

- SpaceX primary goal is to produce General transportable spacecraft
- Management improvement of simultaneously all facilities can improve success rate

Introduction

CONTEXT

- Finding out the motive of SpaceX
- Data Discovery

PROBLEM

- Prediction on a project before launching to minimize cost.
- Scope of improvement.

Why?

- Reduction of cost
- Reduction of energy and labor usage
- Consistent Improvement

Section 1

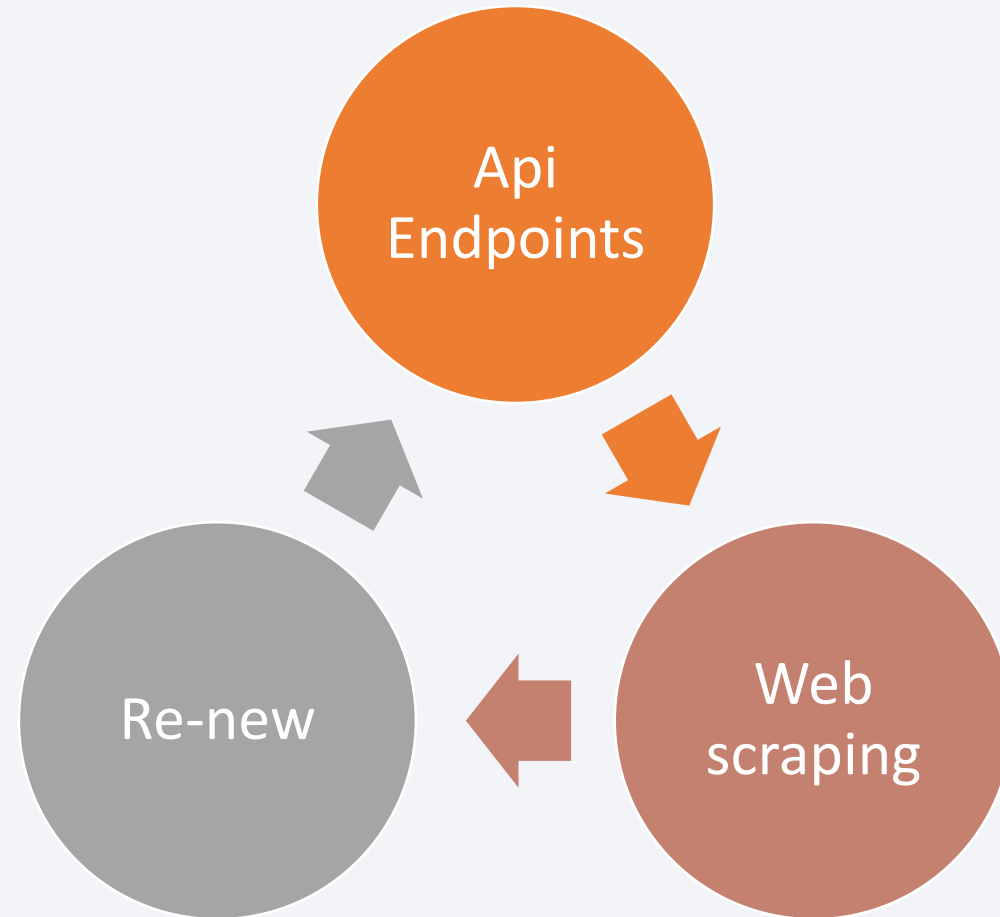

Methodology

Methodology

Executive Summary

- Data collection methodology:
 - Data was gathered through multiple API endpoint & web scraping
- Perform data wrangling
 - Processing includes dealing with NAN value(not a number),converting categorical features to numeric features.
- Perform exploratory data analysis (EDA) using visualization and SQL
- Perform interactive visual analytics using Folium and Plotly Dash
- Perform predictive analysis using classification models
 - Model is build on Cross-Validation and 80%,20% training testing split
 - Logistic regression , Support Vector Machine ,Decision Tree , K Nearest Neighbors algorithms are tested .

Data Collection

GET NOOTBOOK

Data Wrangling

Data handling

Handling NAN

Encoding to
numeric

GET NOOTBOOK

EDA with Data Visualization

GET NOOTBOOK

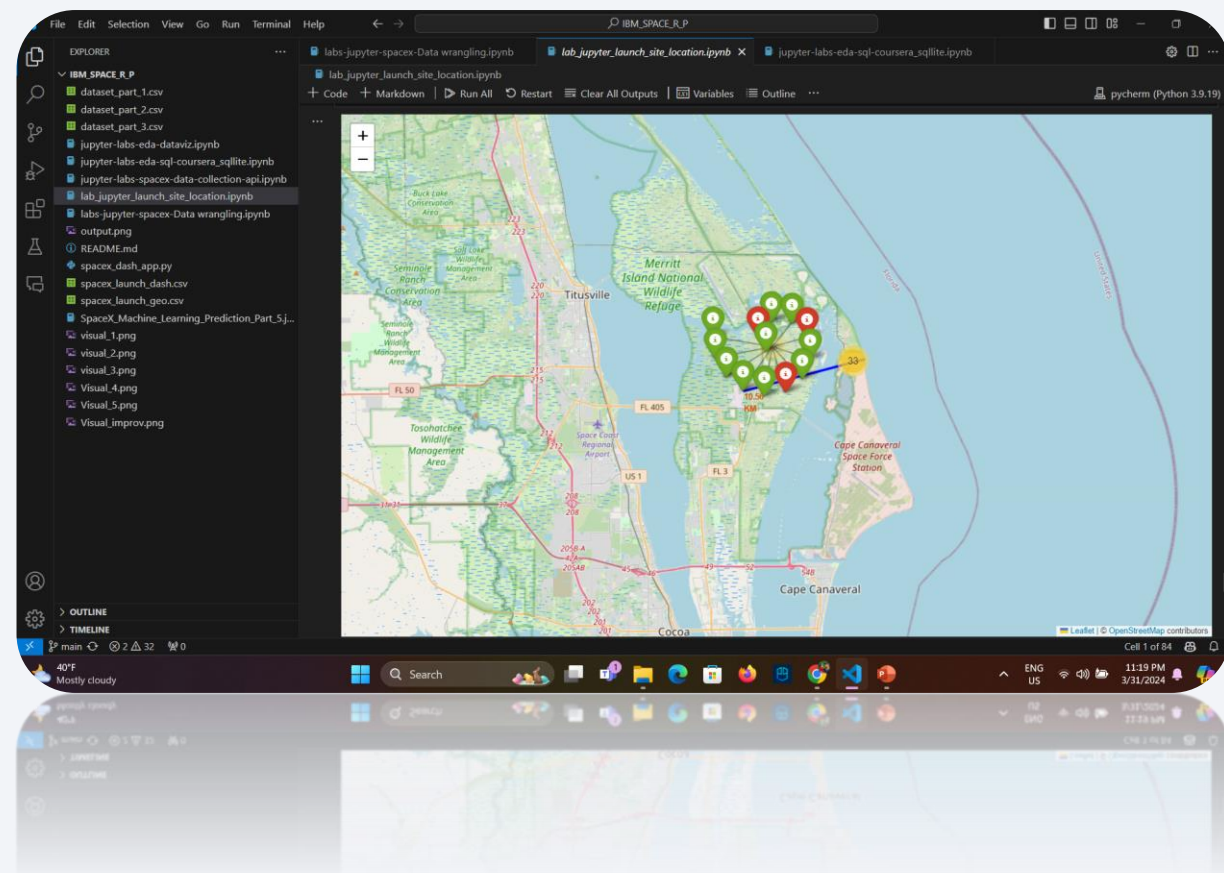

EDA with SQL

- Compensative possible SQL integration can be possible
- Creates possibility of we-application

GET NOOTBOOK

Build an Interactive Map with Folium

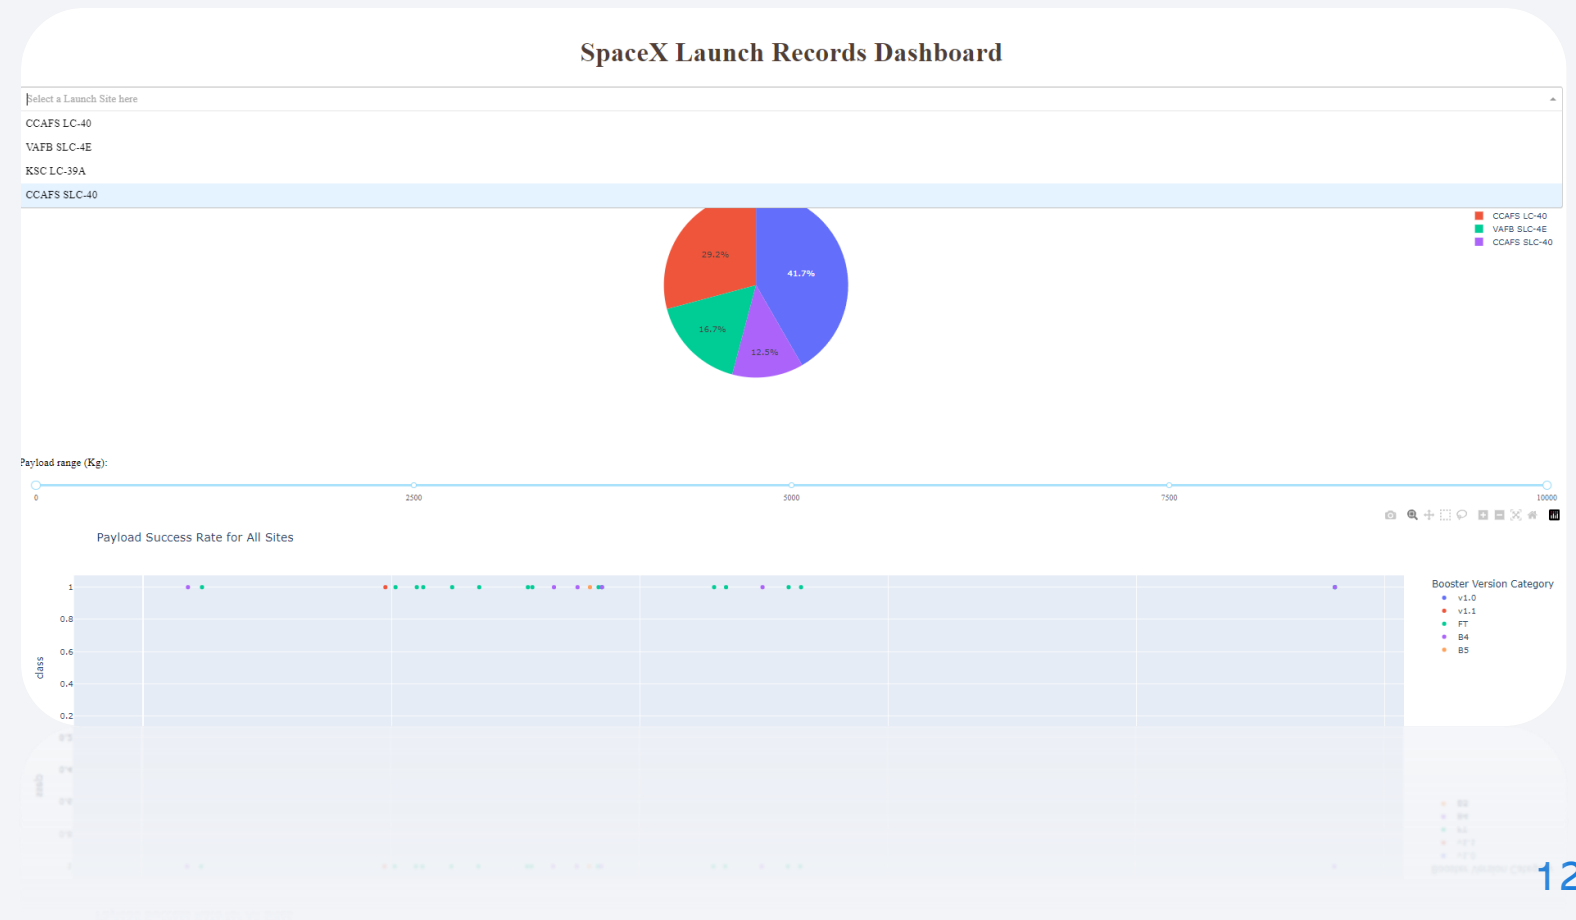

- Integration of folium and Jupiter-lab based application is used for better visualization of geo-data.

GET NOOTBOOK

Build a Dashboard with Plotly Dash

- For better visualization for Business and stake holders interactive studio was created.

GET PYTHON

Predictive Analysis (Classification)

- Multiple Algorithms used to predict on Success or failure
 - Model is build on Cross-Validation and 80%,20% training testing split
 - Logistic regression , Support Vector Machine ,Decision Tree , K Nearest Neighbors algorithms are tested .

Results

- Though The predictive answer scope is narrow but descriptive answer can be found.

The background of the slide is an abstract composition. It features a dark blue base color. Overlaid on this are numerous diagonal streaks in shades of red and cyan. A faint, light blue grid pattern is also visible, particularly in the lower half of the image. The overall effect is dynamic and technological.

Section 2

Insights drawn from EDA

Flight Number vs. Launch Site

- SpaceX uses their one station too much frequently for every purpose

Payload vs. Launch Site

- WAFB SLC 4E is not used for higher payload

Success Rate vs. Orbit Type

- Willingly trying to only focus on long term

Flight Number vs. Orbit Type

- The grouping looks some relation comprehensive understanding required

Payload vs. Orbit Type

- This graph also proves SpaceX is more concerned about space traveling

Launch Success Yearly Trend

From 2013

Thank you!
